Distribution of contact details within linkbird
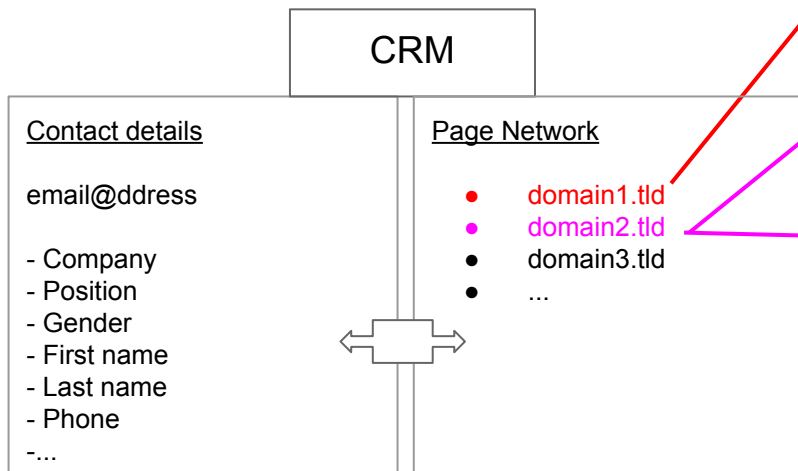

Each contact can have a portfolio of websites that he owns / administers. The domains are stored in the CRM´s page network and are linked to the contact details.

If a URL enters the tool as a:

- Link
- Source
- Alert / Sitehunter proposal

it´s being matched with the CRM and if the URL´s domain exists in the page network, the corresponding contact details are displayed.

This information will also be shown in the toolbar!

CRM

Contact details

email@ddress

- Company
- Position
- Gender
- First name
- Last name
- Phone
-...

- domain3.tld
- ...

Links
Linkorigin = http://www.domain1.tld/subpage1/…

displayed contact details:
- email@ddress
- First name
- Last name

Sources
Linkorigin (desired) = http://www.domain2.tld/subpage1/…

displayed contact details:
- email@ddress
- Gender
- First name
- Last name
- Phone

Alerts / Sitehunter
URL (proposed) = http://www.domain2.tld/subpage2/…

displayed contact details:
- email@ddress
- Gender
- First name
- Last name
- Phone

linkbird

Explanation:

Each contact can have a portfolio of websites that he owns / administers. The domains are stored in the CRM´s page network and are linked to the contact details.

If a URL enters the tool as a:

- Link
- Source
- Alert / Sitehunter proposal

it´s being matched with the CRM and if the URL´s domain exists in the page network, the corresponding contact details are displayed.

This information then is also displayed by the toolbar.
